DETECT, PROTECT, DISRUPT

CSIS

Maximise your threat overview
and drastically mitigate losses

Rumsfeld's famously pithy quip (opposite) may have been alluding to the precariousness of the world in 2002. However, shift the context to our contemporary world, and it may just as well describe the uncertainty embraced by cybersecurity teams trying to stay one step ahead of tomorrow's threats.

You can't control
what you can't see

With the increasing digitisation of society has come the explosive growth of the underground economy. Malicious actors are now more organised, and the crimes they commit have become bigger, more intricate, and more destructive.

Cyber incidents that used to be seen as a purely technological issue now typically extend well beyond the technology domain to strike at the very heart of business value and performance. As security and data integrity have become mission-critical imperatives, the penalties for getting cybersecurity wrong have become increasingly steep, and increasingly public.

In the fight against cybercrime, organisations that once relied purely on reactive technology have come to realise that they can't control what they can't see.

Today, organisations need simple solutions to manage and orchestrate their growing security portfolios.

Getting a clear and immediate understanding of the threat landscape forms the pivot around which successful cyber risk management strategy revolves – a first class cybersecurity armoury underpinned by the quality and integration of relevant and timely threat intelligence.

" There are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. **But there are also unknown unknowns, the ones we don't know we don't know."**

Donald Rumsfeld, 12 February, 2002

THREAT OVERVIEW

3 good reasons to consider
CSIS Threat Intelligence Services

01.

Secure, vigilant and resilient approach

Apply a secure, vigilant, and resilient approach that is aligned to your cyber risk posture and programme.

02.

Anticipate high-impact scenarios

Gain a broad understanding of attackers' motives and the ongoing ability to anticipate high-impact scenarios.

03.

Reduce the impact of cyberattacks

Significantly reduce the impact of cyberattacks. They may be all but inevitable, but the extent of their damage is not.

Business impacts
of cyber attacks

- Loss of intellectual property
- Loss of customer & contract revenue
- Devaluation of your brand name
- Public relations & crisis management
- Insurance premium increases
- Legal fees & litigation
- Customer breach notification
- Operational disruption or destruction

Typical data targeted
by cyber attacks

- Pricing data
- Transactional data
- Benefits records
- Finance documents
- Invoices
- Strategic plans & goals
- Organisational charts
- Employee resumes

CSIS
Threat Intelligence Services

YOUR BENEFITS

- Drastically mitigate losses on your digital platforms.
- Maximise your threat overview.
- Preserve business continuity.
- Optimise the deployment of your internal resources.

- Fast and easy deployment with minimal start-up cost.
- Easy integration with most leading threat intelligence platforms.
- Comply with an evolving regulatory environment.

BIG ENOUGH TO MATTER, SMALL ENOUGH TO CARE

Since 2007, some of the world's largest financial institutions and enterprise organisations have relied on our comprehensive and integrated cybersecurity system to collate, analyse and apply threat intelligence to protect both their own and their customers' assets.

Credited by Gartner Group for our threat intelligence capabilities, we are a leading pure-play cybersecurity company providing cybersecurity coverage 24 hours a day, 365 days a year. Particularly suited to medium and large organisations who need to augment their existing cyber security setup, CSIS Threat Intelligence Services is a proven financial crime analytics solution that provides best practice protection and drastically reduces reimbursement costs.

CSIS

REST ASSURED.

CSIS IN BRIEF

- Employee-owned Group founded in Copenhagen in 2003.

- Preferred IT security provider to some of the world's largest financial services and enterprise organisations.

- Credited by Gartner Group for outstanding threat intelligence capabilities.

- Renowned for cybersecurity advisory services and managed security solutions, as well as incident response, forensics and malware reverse engineering capabilities.
